

BNF Tools

Download and Installation

The BNF Tools has been built with Eclipse Luna SR1 and requires at least Xtext and its dependencies to be installed. The easiest way to get setup is to download the Eclipse Luna Modelling Tools Package for your platform and install Xtext either from the Eclipse Marketplace or from the Modelling Components Installation Wizard.

After installing Xtext, close Eclipse, download the BNF Tools [?Core](#) and [?UI](#) plugins and place them in the Eclipse dropins folder. Start Eclipse and start using the BNF Tools!

An update site for more convenient installation may be provided at some point in the future.
