

BNF Tools User Guide:

- Open The BNF Tool.
- Create a new Java Project --> Rightclick this Project, choose configure and add xTextnature.
- Now create a file in the src folder with ending .bnf e.g. Test.bnf
- open the file and it should behave be able to generate BNF Grammers
- after saving your file you can use the generate button to either generate a PDF or a RTF and a .fo file in the src-gen folder (for this it you need to configure refreshing in your workspace: Window -> Preferences -> General -> Workspace use Refresh using native hooks or polling **and** Refresh on access)
