

BNF Tools User Guide:

- Open the BNF Tools.
- Create a new Java Project.
- Create a file in the src folder with ending .bnf e.g. Test.bnf.
- Confirm adding xText nature to the project in the pop-up dialog.
- Open the file and add your BNF.
- After saving your file, you can use the generate button to either generate a PDF or an RTF in the `src-gen`.
An intermediate .fo file is also generated in the `src-gen` folder. You may need to configure auto-refreshing in your workspace if not already configured: Preferences -> General -> Workspace: Check "Refresh using native hooks or polling" and "Refresh on access".
